NEURO&SPINE EXCELLENCE

→ EXPERIENCE EXCELLENCE: CHOOSE PIEZOSURGERY® IMPROVES NEURO & SPINE SURGERY

→ YOUR CHALLENGES ARE COMPLEX. MECTRON CAN HELP YOU.

We understand that as a clinician, you seek technological solutions to accompany your expertise, that will allow you to optimize workflow, while ultimately providing your patients with the best postoperative results.

After performing extensive research on clinician needs and the challenges presented by traditional instrumentation, we developed a solution to provide you with increased safety, precision and surgical performance.

The PIEZOSURGERY® *plus* promotes ease of use and precise handling during osteotomies, with reduced trauma to adjacent soft tissue, improved bone healing, reduced pain, swelling and edema promoting better healing and an overall reduction in the length of hospitalization stays for patients.¹

The expansive postoperative benefits of PIEZOSURGERY® have been experienced by distinguished surgeons in over 80 countries across our globe.

Surgical procedure requiring the opening, removal or remodeling of bone are supported by PIEZOSURGERY®.

→ CLINICAL INDICATIONS

Surgical fields of application:

- Spine Surgery
- Neurosurgery
- Pediatric neurosurgery

→ WHAT OUR USERS THINKS

We were trying to find a new instrument where we could achieve a bone craniotomy or a spine laminectomy without losing bone tissue. We changed how to do spine surgery, we can perform a multi-level laminotomy without losing bone tissue and we can perform at most five separate lamina.

Dr Legnani F., Neurosurgeon at the IRCCS Institute Foundation Besta, Milan (Italy)

This tool allows us to do the osteotomy with the minimal risk of damaging the underline structures. It is an instrument that is worth trying and to learn how to use it.

Prof. Di Rocco F., Neurosurgeon at GH Est-Hôpital Femme Mère Enfant, Lyon (France)

You have a very nice control over your bone cutting and bone modeling. It is very easy to handle and I think there is not a large learning curve you have to go through.

Dr. Messing-Jünger M., Neurosurgeon at Asklepios Klinik, Sankt Augustin (Germany)

→ EXPERIENCE SPINE SURGERY

→ ADVANTAGES OVER TRADITIONAL TOOLS

- Safer for dura & nerves, allowing improved decompression close to vascular structures
- Less heat generation in comparison to drills²
- Increased surgical control & flexibility in bone cutting³
- Improved reconstruction & bone grafting⁴
- Reduced overall surgical time due to safety³
- Allows for transversal bone cut as opposed to an exclusively orthogonal cut

“*Piezosurgery proved to be a useful and safe technique for selective bone cutting and removal of osteophytes with preservation of neuronal and soft tissue in ACDF. In particular, the angled inserts were effective in cutting bone spurs behind the adjacent vertebra which cannot be reached with conventional rotating burs.*”⁵

→ LAMINOTOMY AND LAMINECTOMY

A precise, safe and efficient approach to cutting spinal bone, improving workflow, allowing for better bone reconstruction and an overall decrease of average surgery time.

Recommended insert:

- MT8-20L

Additional inserts:

- MT5-10L • MT4-20+ • MT4-10+

→ CORRECTION OF DEFORMITIES

Safe and efficient bone correction even in the most difficult areas, ensuring improved bone fusion due to the absence of heat and minimized bone loss.

Recommended insert:

- MT8-20L

Additional inserts:

- MT5-10L • MT4-20+

→ REMOVAL OF OSTEOPHYTES

Safer and faster removal of osteophytes, even in areas with reduced visibility.

Recommended insert:

- MT8-20L

Additional inserts:

- MP4+ • MP6L

→ ANTERIOR CERVICAL DISCECTOMY AND FUSION (ACDF)

Safe access to difficult to access areas in the cervical spine.

Recommended insert:

- MT8-20L

Additional inserts:

- MP5L • MP6L

→ EXPERIENCE NEUROSURGERY

→ ADVANTAGES OVER TRADITIONAL TOOLS

- Safer for dura, nerves, vessels, sinuses & orbits⁵
- Reduced risk of CSF leak²
- Better aesthetic result for patient⁶
- Less need for fixation, for dural & bone substitutes⁴
- Faster bone healing^{2,7}

“Piezoelectric surgery represents an innovative technique to perform safe and effective osteotomies and is an alternative to traditional bony tissue management using rotating or perforating instruments. We evaluated the safety and feasibility of craniotomies using an ultrasonic device that allows the selective cut of mineralized structures, avoiding damages to the vascular, dural, and parenchymal structures.”⁶

→ CRANIOTOMY AND CRANIECTOMY

Reduced risk of CSF leak, better aesthetic result for the patient, sparing of fixation materials, dural and bone substitutes, due to selective and precise cutting. Reduced heat ensures improved ossification with implants.

Recommended insert:

- MT4-10+

Additional inserts:

- MT15-10 • MT4-20+ • MT6S-10

→ DRILLING A HOLE FOR DURAL SUSPENSION

One device can be used for all bone management, including drilling holes in the bone.

Recommended insert:

- MD3-14

Additional insert:

- MD2-10

→ ACOUSTIC NERVE DECOMPRESSION

Improved and increased safety in nerve decompression due to selective bone management and reduced heat.

Recommended insert:

- MP5L

Additional insert:

- MP6L

→ ENDOSCOPIC TRANSPHENOIDAL APPROACH

Safer decompression of dura, internal carotid artery and optic nerves due to selective cutting and heat reduction, allowing for the possibility to reconstruct the bone flap with increased safety and precision.

Recommended insert:

- MT8-20L

Additional insert:

- MP6L

→ EXPERIENCE PEDIATRIC NEUROSURGERY

→ ADVANTAGES OVER TRADITIONAL TOOLS

- Minimal loss of bony tissues ^{2,8}
- Minimal need to retract dura & orbital tissues ⁵
- High flexibility in designing bone flap ³
- Improved bone flap reconstruction ⁴
- Reduced blood loss ³
- Blood-free surgical site ^{2,9}

“*Piezosurgery [PS] is a safe and effective tool that can be specifically recommended for bone splitting and graft, laminotomy, and craniotomy in cosmetically eloquent areas. The limit of operation times can be overcome by a learning curve in neurosurgery and Piezosurgery Plus [PSP].*”⁴

MT1S-10

MT6S-10

MT4-10+

MT4-20+

MP5L

MP6L

MT8-20L

→ CRANIOPLASTY AND RESHAPING OF FRONTO- ORBITAL BANDEAU

Safe and precise cranium and orbital bone cutting, sparing of bony tissues and high flexibility in bone remodeling.

Recommended inserts:

• MT1S-10 • MT4-10+

Additional inserts:

• MT4-20+ • MT6S-10

→ ENDOSCOPIC STRIP CRANIECTOMY

Safe bone cutting in difficult to access areas with the use of the endoscope, eliminating the risk of rotating or oscillating tools.

Recommended insert:

• MT8-20L

Additional inserts:

• MP6L • MP5L

→ CHIARI MALFORMATION

Improved safety and flexibility of bone management in comparison to traditional rotating and oscillating tools.

Recommended insert:

• MT4-10+

Additional inserts:

• MT8-20L • MT1S-10 • MT4-20+

→ BONE SPLITTING

Precision and flexibility of bone harvesting and remodeling which is not possible with high speed instruments.

Recommended inserts:

• MT1S-10 • MT4-10+

Additional inserts:

• MT1-20 • MT4-20

→ PIEZOSURGERY® *plus* – THE FUTURE OF BONE CUTTING!

Innovative features, including two independent handpieces and channels, provide you with superior results for every surgery.
